a
Heavier males benefit more
1 = no change
Males: all experiments
0.94 (0.91–0.98)
6% more favourable
Males: weight-lowering
0.90 (0.86–0.94)
10% more favourable
Males: non-weight-lowering
0.98 (0.94–1.03)
Females: all experiments
1.03 (0.99–1.07)
Filled: P < 0.05; open: P ≥ 0.05
0.85
0.90
1.00
1.10
Treatment HR change per 1 s.d. higher weight
Greater benefit in heavier mice
Greater benefit in lighter mice
b
Gradient mainly in weight-lowering experiments
Weight-lowering trend: HR 0.91
per heavier quartile, P = 4.7 × 10⁻⁵
Weight-lowering experiments
Non-weight-lowering
Median lifespan increase (%)
